

CONTENTS

1. INTRODUCTION.....	7
2. HOMOGENEITY OF FINE-GRAINED MIXTURES	13
2.1. Division of mixtures due to homogeneity	17
2.2. Studies on the settling velocity on the basis of selected kind of fly ash.....	19
3. FLOW OF LIQUIDS IN CLOSED CONDUITS	27
3.1. Linear flow resistance in closed conduits.....	29
3.2. Local flow resistance in closed conduits	31
4. DETERMINATION OF DARCY FRICTION FACTOR VALUES.....	32
4.1. Range of transient flow zone	35
4.2. Generalized Reynolds number.....	39
5. METHODOLOGY OF RHEOLOGICAL PROPERTIES LABORATORY TESTS OF SELECTED FLY ASH-WATER MIXTURES	41
6. SELECTION OF RHEOLOGICAL MODEL AND CALCULATION OF ITS PARAMETERS	44
6.1. Mixtures without yield point	44
6.2. Mixtures with yield point.....	47
7. INFLUENCE OF MIXTURE CONCENTRATION ON THE VALUES OF RHEOLOGICAL PARAMETERS.....	57
8. FLOW OF FLY ASH-WATER MIXTURE IN THE LABORATORY PIPE LOOP IN THE TRANSIENT FLOW ZONE.....	59
9. DETERMINATION OF THE DARCY FRICTION FACTOR λ VALUES IN RELATION TO THE REYNOLDS NUMBER	62
10. PIPELINE ROUGHNESS	67
11. FLOW OF QUASI-HOMOGENOUS MIXTURES IN GRAVITATIONAL PIPELINES	78
11.1. Equation of flow for a gravitational hydrotransport pipeline of quasi-homogenous mixtures	79
11.2. Examples of pressure distribution in the hydraulic transport pipelines during the flow of quasi-homogenous mixtures	83
12. USE OF FLY ASH AND OTHER POWER GENERATION WASTE IN HARD COAL MINES	96

12.1. Types of waste and by-products used in technologies of filling of voids in underground coal mines in the light of the Waste Management Act	97
12.2. Technical project of the filling of underground voids procedure	98
12.3. Selected examples of construction, equipment and operation of generation waste and water mixtures preparation plants	100
13. SUMMARY	113
BIBLIOGRAPHY	115
Abstract	126
