

CONTENTS

ABBREVIATIONS AND ACRONYMS	9
1. INTRODUCTION	11
2. DEVELOPMENT OF ALTERNATIVE FUELS IN EUROPE	14
2.1. Legal aspects of the development of alternative power sources for transport	14
2.2. Alternative transport fuels in the European Union.....	18
2.3 Prospects for development of fuels for transport - national factors.....	23
2.4. Analysis of FCEVs and hydrogen as the fuel of the future.....	31
2.4.1. Various aspects of hydrogen production and applications.....	31
2.4.2. Hydrogen production methods.....	34
2.4.3. Hydrogen as the most promising decarbonisation option for vehicles.....	43
2.4.4. National hydrogen production initiatives.....	46
3. ENVIRONMENTAL LIFE CYCLE ANALYSIS MODELS FOR VEHICLE AND FUEL PATHWAYS	52
3.1. Nature and importance of the life cycle assessment method.....	52
3.2. Environmental footprints.....	55
3.3. Life cycle assessment methods considering exergy analysis.....	58
3.4. Well-to-wheel method.....	62
3.5. Examples of the environmental analysis of the vehicle and fuel life cycle....	65
3.6. Review of vehicle and fuel life cycle assessment models.....	78
3.7. Multi-criteria models used for sustainable transport assessment.....	80
4. APPLICATION OF DIVERSE ENVIRONMENTAL LIFE CYCLE ASSESSMENT METHODS FOR FUELS AND VEHICLES	84
4.1. Life cycle assessment of the means of road transport.....	84
4.1.1. Research methodology	84

4.1.2. Analysis of the structure of means of road transport	87
4.1.3. Analysis of emissions from the operation of means of road transport	89
4.1.4. Analysis of GHG emissions from the operation of means of transport	96
4.1.5. Effect of the operation of means of transport on human health	98
4.2. Computational model of life cycle analysis for EV battery charging	101
4.3. Comparative life cycle analysis of petrol ICEVs, diesel ICEVs, and BEVs	105
4.3.1. Research methodology	105
4.3.2. Carbon footprint assessment	109
4.3.3. Water footprint assessment	112
4.3.4. Human health footprint assessment	114
4.3.5. Resource footprint assessment	116
4.3.6. Exergy footprint assessment	118
4.4. LCA for resource depletion evaluation according circular economy	120
4.5. Life cycle analysis of hydrogen used as a transport fuel	122
4.5.1. Life cycle assessment of hydrogen fuel cell-powered vehicle	122
4.5.2. LCA of FCEV powered by hydrogen produced from coke oven gas	125
5. VEHICLE LIFE CYCLE ASSESSMENT MODEL	131
5.1. LCSA framework proposed for the automotive industry	131
5.2. Automotive sustainability assessment criteria	133
5.3. Eco-efficiency assessment method of transport system	136
6. PROSPECTS FOR FURTHER RESEARCH ON THE ENVIRONMENTAL ASSESSMENT OF FUELS AND VEHICLES LIFE CYCLE	141
7. SUMMARY AND CONCLUSIONS	146
BIBLIOGRAPHY	150
Abstract	167
