

TABLE OF CONTENTS

Rozszerzone streszczenie i motywacja badań	7
Abstract	9
ACKNOWLEDGEMENTS	11
1. INTRODUCTION AND SCOPE OF WORK	13
2. DERIVATIVES OF THE NATURAL MODES, DYNAMIC AXIS ROTATIONS AND CURVATURE CHANGE IN STRUCTURAL HEALTH MONITORING	17
3. REVIEW OF THE APPLICATION OF INCLINOMETERS, ROTATION RATE AND ROTATION ACCELERATION SENSORS IN MODAL ANALYSIS AND STRUCTURAL MONITORING	31
3.1. Rotation Rate and rotation acceleration sensors	32
3.2. Shearography	39
3.3. Inclinometers	41
3.4. Conclusions	45
4. LITERATURE REVIEW OF MONITORING OF REINFORCED CONCRETE STRUCTURES USING VIBRATION-BASED METHODS	47
4.1. Studies on general methods of damage detection and problems in the monitoring of r/c structures	48
4.2. Stiffness distribution reconstruction methods	58
4.3. Conclusions	63
5. LITERATURE REVIEW ON THE MASS LOCALISATION AND IDENTIFICATION TECHNIQUES	65
6. MODEL UPDATING AND MODAL ANALYSIS METHODOLOGY	67
6.1. Model updating	67
6.1.1. Optimisation problem	67
6.1.2. Genetic algorithms	69
6.1.3. Computer system	70
6.2. Experimental modal analysis	71
7. APPLICATION OF ROTATION RATE SENSORS IN MASS IDENTIFICATION	79
7.1. Numerical analysis of mass identification using rotational modes	80
7.1.1. Example 1 – simply supported beam	81
7.1.2. Example 2 – cantilever beam	93
7.1.3. Conclusions	96

7.2.	Experimental Results	97
7.2.1.	General description.....	97
7.2.2.	Modal analysis.....	100
7.2.2.1.	Modal analysis of a steel beam in free-free configuration...	101
7.2.2.2.	Modal analysis of a steel beam in the simply supported configuration.....	104
7.2.3.	Mass identification.....	106
7.2.3.1.	Steel beam in the free-free configuration	107
7.2.3.2.	Simply supported steel beam	116
7.2.4.	Conclusions	123
8.	STIFFNESS DISTRIBUTION RECONSTRUCTION OF DAMAGED REINFORCED CONCRETE BEAMS WITH ROTATION RATE SENSORS.....	125
8.1.	Modal analysis	127
8.1.1.	Ultrahigh performance concrete beam results	127
8.1.2.	Reinforced concrete beam results	143
8.2.	Stiffness distribution reconstruction	155
8.2.1.	Ultrahigh performance concrete beams.....	155
8.2.2.	Reinforced concrete beam results	172
8.2.2.1.	Free-Free configuration	172
8.2.2.2.	Simply supported configuration.....	186
8.3.	Conclusions.....	191
9.	CONCLUDING REMARKS.....	195
10.	REFERENCES	199
11.	APPENDIX	227
11.1.	Stiffness and mass matrices of finite elements	227
11.2.	Steel springs technical data	229
11.3.	Numerical model of a steel beam	230
11.4.	Ultrahigh performance concrete samples technical data.....	231
11.5.	Rotation rate and translational acceleration sensors properties	233
11.6.	Numerical models of reinforced concrete beams	235
12.	LIST OF FIGURES	237
13.	LIST OF TABLES.....	242
